PROFESSIONAL SUMMARY

Software Engineer with expertise in TypeScript, React, Next.js and Node.js, passionate about creating innovative web solutions that positively impact users. Delivered products for FinTech and SaaS industries, improving reliability and performance by leveraging modern frameworks and cloud architectures.

WORK EXPERIENCE

Full-Stack Engineer - Keep; Canada   **Jan 2024 – Dec 2024**
- Enhanced the UI and core features of Keep's credit card product by upgrading functionalities such as creating new cards, adjusting credit limits, and freezing cards, reducing task completion time and improving user experience.
- Streamlined workflows for physical card launches, enabling users to activate and manage cards directly from the app and driving higher adoption rates.
- Developed an accounting management system from scratch, significantly reducing manual bookkeeping efforts through features like automated receipt matching and seamless QuickBooks Online integration.

Full-Stack Engineer - BluBear; Ecuador   **May 2023 – Dec 2023**
- Built the 1001carros.com ecosystem, including website, server and admin, included SEO strategies that increased search engine visibility, driving higher traffic and improving user engagement through a streamlined architecture.
- Designed and maintained a scalable cloud architecture using AWS enabling efficient deployment and management of various projects while optimizing cloud resources.
- Enhanced search functionality with Meilisearch, significantly reducing latency and improving search relevance, leading to improved user engagement and retention.

Full-Stack Engineer - Wompad; Ecuador   **Nov 2021 – Jun 2022**
- Redesigned CMS modules for online stores, improving backend efficiency and enabling faster content updates, reducing content publishing time by 20% using PHP and jQuery.
- Integrated discount coupons and free shipping, into the purchasing process of online stores, enhancing customer satisfaction and driving sales, while using the SCRUM framework to ensure efficient and agile software development.

Front-End Engineer - Box Solutions; Ecuador   **Jun 2021 – Oct 2021**
- Developed a data collection SPA with Angular 11 to streamline the process of gathering information from farmers, reducing operational time and minimizing human errors, resulting in more efficient data collection.
- Integrated Firebase Authentication and Firestore, enabling secure data storage and automated Excel exports, improving user interactions and data handling.

SKILLS

TypeScript, JavaScript, React, NextJS, NodeJS, SQL, HTML/CSS, Apollo GraphQL, Prisma, PHP, Laravel, Vue3, TailwindCSS, PostgreSQL, AWS, Agile methodologies.

EDUCATION

Computer Science Engineering, Escuela Superior Politécnica del Litoral   **Aug 2023**
- Relevant Coursework: Web/Mobile Development, Software Engineering, Databases management, Cloud Computing, Data Structures, Software Design

AWS Certified Cloud Practitioner   **Mar 2023**
